

# Multiboard Light

Multiboard Light is a new line of interactive whiteboards which help users create their own solutions to meet their specific needs.

## Unrivalled image quality

The UHD 4K resolution delivers stunningly deep, true-to-life images. The screen also has special light sensors, which, together with the high brightness and contrast of the display, make it possible to use the devices even in bright sunlight.

## Unlimited connectivity

The Prestigio Solutions™ Multiboard Light has multiple ports for connecting additional devices, computer peripherals, and USB drives. Notably, some of the ports (including USB Type-C) are located on the front panel, allowing users to connect or charge any types of devices they might need for presentations or video conferences with maximum ease.

## Multitouch

The device's touchscreen is the best in its class and supports 20 touch points and 10 simultaneous writing points, including a feature that allows users to write in two different colors at the same time.

## Ability to create solutions for your own needs

It is possible to additionally link an embedded PC based on a powerful 10th Gen Intel® processor with a preinstalled Multiboard application package for business and education, including the mozaBook Classroom SW with a free license for a whole year. In addition, installing a licensed Windows OS on an additional PC will open even more opportunities for study or work.

**Prestigio**  
SOLUTIONS™

Devices from the new Prestigio Solutions™ Multiboard Light family bring together all of the basic interactive functions for presentations, collaboration, and wireless communication. They will become the core of smart meeting rooms or special classrooms for interactive and even remote learning.
